

Transpread Side Tipper Range

The Transpread Side Tipper Range is ideal for trucks with a low GCW letting you take two complete spreader loads to your destination.

An extremely light tare weight allows you to carry up to 10% more payload than conventional trailers.

A compact design makes negotiating farm tracks and gateways easy, while allowing unloading in tight areas.

The three meter door opening ensures minimal waste when loading your spreader.

The tipping is normally 2.7m which is fully adjustable to suit your application.

Save time with a quick transfer of fertiliser as all product leaves the tipper. No shoveling, no mess.

A fitted roll tarp comes as standard for quick and easy covering.

Minimal wear and tear due to absence of gears, sprockets and chains.

A four bank hydraulic control valve allows individual control over the two stabilizing legs and one each controlling the slide and tipping rate. These versatile controls allow a part load to be tipped without hassle or mess.

See over for details on truck and trailer options in the Transpread Side Tipper Range.

Transpread Side Tipper Range

Trailer

- Independent Hydraulic system, no contamination of prime mover hydraulic systems.
- High maneuverability allow towing to difficult to access places, often allowing you to take the unit to the back of a farm.
- Available as 6, 8 & 10 tonne tandem axle and 14 & 15 tonne tri axle. Optional configurations include dual bins and quad axles.
- Independent hydraulic system available making the trailer highly interchangeable between trucks.

Truck

- No engine to maintain as the truck PTO runs the Side Tipper hydraulics.
- Quick removal of the Side Tipper (approximately 5 minutes) is achieved with industry standard twist locks. This versatility enables the truck to be used with other bodies as required.
- Available as 6, 8, 10 ,14 & 15 tonne bins.

We reserve the right to change design and/or specifications without notice.
